

OS Lec-6

5 Steps 1-

① Power ON

ON → Power supply

→ Mother board

→ hard disk → Storage

② CPU Loads BIOS or UEFI

① CPU init :

② goes to a chip BIOS

③ BIOS or UEFI run tests & init hardware

3.1) Loads some settings from a memory area,

Backed by CMOS
Battery

3.2) Program loads with settings

POST → Power on self test

④ BIOS or UEFI, hands off to Boot device

Boot device → disk (HDD or SSD)

→ CD

→ USB device

Boot loader → Program execute → ON
actual OS

① MBR → Master Boot Record

disk → boot index

old systems -

② $\Sigma FI \rightarrow$

partition in disk

Boot loader

⑤ Boot loader. Loads the full OS

Program \rightarrow actual OS initialize

Windows \rightarrow bootmgr.exe

Mac \rightarrow boot.efi

Linux \rightarrow GRUB
